

MABEL MENSAH

Backend Web Developer

mabelmensah515@gmail.com | +233 500 276 305 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#) | Accra, Ghana

PROFESSIONAL SUMMARY

Backend Web Developer with hands-on experience building and deploying Python-based web applications using FastAPI. Strong foundation in backend logic, API development, and database integration, with practical exposure from internships and collaborative projects. Combines technical problem-solving skills with a background in customer-facing roles, enabling the development of reliable, user-focused digital solutions.

TECHNICAL SKILLS

Languages: Python, HTML, CSS

Frameworks & Tools: FastAPI, Git, GitHub

Databases: MongoDB

Other: REST APIs, Backend Logic, Google Workspace, Collaborative Development

WORK EXPERIENCE

Backend Developer

Astra Creatives (Esports & Digital Initiative) | Accra, Ghana

Dec 10, 2025 – Present

- Collaborate with the Head Engineer on backend and website development tasks.
- Support API integration, feature implementation, debugging, and iterative system improvements.
- Contribute to technical discussions, code reviews, and platform scalability planning.

Backend Developer (Immersion Experience)

GuG Kitchenwares & Plastics | Accra, Ghana

Oct 2025 – Nov 2025

- Designed and developed a full backend e-commerce API using FastAPI and MongoDB.
- Implemented secure JWT-based authentication with role management (admin, staff, customer).
- Built core systems including product management, cart operations, order processing, reviews, and restock subscriptions.
- Deployed the backend using cloud services and exposed APIs via Swagger UI for team access.

Backend Developer (Immersion Experience)

Japan Medical Center – Web Development Team | Accra, Ghana

Oct 2025 – Nov 2025

- Developed backend services for a hospital appointment booking system using FastAPI and MongoDB.
- Implemented appointment creation, retrieval, and status management endpoints.
- Integrated SMTP-based email notifications for patients and administrators.
- Improved date and time formatting logic to ensure clear, user-friendly communication.

KEY PROJECTS

Astra Creatives – Web Development Assistant

Industry Collaboration

- Worked directly with the Lead Engineer to develop and improve the Astra Creatives website.
- Assisted with implementing responsive layouts, content sections, and functional components.
- Participated in debugging, testing, and deployment preparation tasks.
- Strengthened skills in professional code collaboration, version control, and project delivery.

E-Commerce Backend API – GuG Kitchenwares & Plastics

- Built a complete backend system supporting user authentication, profile management, product CRUD operations, carts, orders, reviews, and reward points.
- Designed scalable project structure and secure middleware using dependency injection.
- **Challenge:** JWT tokens failed during deployment due to missing environment variables.

Solution: Properly configured environment variables on the hosting platform and refactored token handling logic.

[Github](#)

Hospital Appointment Booking System – Japan Medical Center

- Developed backend APIs enabling patients to book appointments and admins to manage appointment statuses.
 - Integrated automated email notifications for booking confirmations and status updates.
 - **Challenge:** Incorrect timestamp formatting caused unreadable email notifications.
- Solution:** Implemented datetime parsing and formatting logic to remove microseconds and improve readability.

Career Grooming Agency Platform

- Collaborated with a team to build backend components for an online learning platform developed during MEST training.

- Contributed to backend logic, API structuring, and collaborative Git workflows.
- **Challenges:** Team misunderstandings and responsibility overlap during development.
Solutions: Resolved through effective communication, role clarity, and shared accountability.

Stellar Advertising Website

- Collaborated in a team to design and build a digital platform for an advertising and event ticketing agency based in Ghana.
- Contributed to backend logic supporting advertisement listings, event previews, and client-created adverts.
- Helped structure APIs that enable users to publish, preview, and manage advertising campaigns efficiently.
- Emphasized usability, performance, and data-driven presentation of advertising content.
- **Challenges:** Team misunderstandings and responsibility overlap during development.
Solutions: Resolved through effective communication, role clarity, and shared accountability.
